Deployment Options

Site License - An iLS/iTC software license is procured for installation on internal servers. An annual maintenance agreement purchased after year 1 includes support and upgrades. If maintenance is not purchased the software will continue to operate based upon the original installation without upgrades or technical support.

Hosted SaaS - Procure an annual subscription that includes recordkeeping, hosting, maintenance, support and ongoing enhancements. This is a predictable "pay as you go" cost model with no internal IT resources required.
